No “one-size-fits-all facelifts” with Dr. Wise

Facial aging is an inevitable process that affects us all. According to Dr. Jeffrey B. Wise, MD, FACS, who is singularly focused on plastic surgery and aesthetic rejuvenation of the face, “There is no longer a one-size-fits-all facelift. Whether patients are considering subtle changes or more dramatic results, patients need to know that they have options.”

To become familiar with the various approaches to minimize the effects of aging, it is important to work with an experienced, facial plastic surgeon. Dr. Wise, New Jersey’s premiere facial rejuvenation surgeon, has performed over 4,000 cases of facelift, eyelid rejuvenation, laser skin resurfacing and fat transfer.

Dr. Wise seeks to redefine the patient/surgeon dynamic with honest, straightforward communication. “I am committed to creating a relationship with my patients, so they are free to express their beauty goals. In return, I am able to provide more nuanced recommendations, with the intention to achieve the most natural aesthetic result.”

In order to further collaborate with his patients, Dr. Wise utilizes the Vectra 3-D Imaging System. This invaluable device allows patients to preview three-dimensional simulations of themselves and the aesthetic procedures that interest them.

Dr. Wise is a double board-certified facial plastic and reconstructive surgeon. While Dr.

Wise has attended some of our country’s finest institutions, specifically Yale, Cornell and the University of Pennsylvania, his true focus is on results. His knowledge and experience earned him a prestigious position as a clinical professor on New York University’s School of Medicine faculty.

He developed the Wise Signature and Wise Revitalize Lifts, which combine multiple, rapid-recovery procedures that work together to give overall cosmetic improvement. Patients leave looking natural, refreshed and healthy, without the telltale signs of surgery.

The Wise Signature Lift includes facelifting, fat transfer, fractionated CO2 laser skin resurfacing, and upper and lower eyelid procedures. When performed concurrently, these procedures target all of the primary symptoms of an aging face.

Dr. Wise has found that combining these procedures into a single surgery is an ideal and convenient way to achieve patients’ aesthetic goals, offering the patient minimal downtime and unparalleled results. Most procedures are performed without general anesthesia and patients go home the same day!

The Wise Center for Plastic Surgery also offers a variety of minimally invasive aesthetic services for those patients seeking a lift with less downtime. Dr. Wise offers Ulthera, which utilizes ultrasound waves to tighten and lift the tissues of the face and brow.

Dr. Wise offers his patients a “liquid” or filler lift, a non-surgical lift that combines dermal fillers such as Juvederm and Radiesse with Botox therapies. Dr. Wise also performs Platelet Rich Plasma treatments, commonly referred to as the “Vampire Lift.”

With Dr. Wise patients find a different kind of dynamic — one based on open dialogue with the utmost respect, and an unhurried emphasis on helping you achieve your personal beauty goals. Dr. Wise is delighted to invite interested patients to contact his office at 973-305-1400 to schedule a complimentary consultation.
